

HOW DO YOU CREATE ONE OF INDIA'S STRONGEST CEMENTS?

YOU START BY USING FEWER NATURAL RESOURCES.

Our people have always focused on lowering CO₂ emission levels and conserving natural resources. For years, the team combined natural limestone with fly ash, an industrial waste. Now, for the first time, they have created a cement using a combination of fly ash and slag, another industrial waste. This not only helped further conserve limestone and lower CO₂ emissions, but also created a product with increased durability and 20% higher concrete strength.

This innovation has helped deliver our three-pronged sustainable approach to business: conserve natural resources, create greener products and fulfill customer needs. It is this 'I Can' spirit of Ambuja Cement that keeps inspiring the team to do better each year. The same spirit that motivates our people to perform passionately and deliver a good outcome. We are proud to present our results for the quarter and nine months ending September 2017.

STANDALONE FINANCIAL RESULTS FOR THE QUARTER AND NINE MONTHS ENDED 30TH SEPTEMBER 2017.

Particulars		Quarter July - Sep 2017	Quarter July - Sep 2016	Year to date Jan - Sep 2017	Year to date Jan - Sep 2016
